

## FOR IMMEDIATE RELEASE

### BESSEY Multi-use Aviation Snip D39ASS

**BESSEY® is bringing an entirely new generation of compound leverage cutting snips to the market. These snips enable more capacity, precision and comfort with easier operation as a result of innovative design and unique construction.**

The new D39ASS snips from BESSEY offer significant technical advantages when it comes to its construction. The snips have an extremely robust joint area which is complemented by a newly developed insert produced from sintered steel. This feature is entirely unique and reduces friction in the pivoting area making the D39ASS both smooth running and extremely wear-resistant.

With a total length of 9 IN and a blade length of 1-1/8 IN these new snips are extremely compact. With a reduced handle opening angle one can comfortably grab the entire handle for maximum application of force. The compact forged jaws permit high-precision cutting of curves and the tightest of radii, while also being very effective at straight cuts. The forged edge's shapes allows work to flow past the user's hand instead of towards it so cutting can be sustained longer and still remain safe which serves to enhance productivity. The forged blades also have a much higher hardness rating (61 HRC) than standard industry snips. A central latch on the top of the handle allows right and left-handed users to open and close the snips with ease, without a change in grip.

BESSEY®. Simply better.
