

# BESSEY Product Training

## BESSEY Tools North America Cutting Tools: D39ASS

# D39ASS : Newest Generation of Compound Leverage Snip

Heating, ventilating and air-conditioning, dry construction and much more

# BESSEY D39ASS

Simply better.

## Optimised design

The reduced handle opening angle guarantees better handling and an even cutting length. Thanks to the compact cutter head with a partially countersunk head screw connection, cutting in curves is even easier and more precise. The spring is located so that it is maintenance free

## Central latch

Thanks to its central position on the top handle, the latch can be operated easily by right-handed and left-handed people, without having to change their grip.

## Extremely robust pivot joint

The joint area with a sintered steel insert ensures that the snips run smoothly and are wear-resistant. The joint area's screwed connection is very robust thanks to a stud bolt.

## Compound Leverage

Compound leverage reduces the effort required considerably. This increases the cutting performance significantly.
