

Press Release – The telescopic drywall support ST from BESSEY

Securely fixes and supports during dry construction

As a specialist for manual clamping tools, BESSEY now also offers a solution for securing a wide variety of building materials on the ceiling. The flexible but stable ST telescopic drywall support serves as a helping “extra hand” for safe one-man assembly during dry construction. It has a GS mark for tested safety, is available in three sizes and can handle up to 60 kilograms.

The stable but flexible construction of the new ST telescopic drywall support holds a wide variety of building materials, such as plasterboard, wooden boards, panels, roof battens or metal bars. Even thin construction foils can be quickly, easily and securely fixed to a dust protection wall. The largest version of the BESSEY telescopic drywall support can be extended up to 2.90 metres. The base plates with a size of 8.5 x 6.5 cm have a swivel range of -45° to +45°. This means it can also be used on slopes. A secure grip – even on sensitive surfaces and maximum load – is ensured by the rubberised contact surfaces. The extremely stable steel tube construction of the BESSEY ST telescopic drywall support is resilient up to a maximum of 60 kilograms. An unintentional retraction of the inner tube is prevented by locking the release button.

Easy, quick and safe handling

Before using the ST telescopic drywall support, make sure that the locking pin on the release button is moved to the left. Only then can the telescopic inner pipe for the presetting be pulled out and locked at the required length. Pushing the locking pin to the right again blocks the release button and secures the inner pipe. Now turn the preset ceiling bracket clockwise using the foam handle until the upper contact surface makes full contact with the work piece and fix it securely in place. To release, turn the bracket anti-clockwise again. As soon as the locking pin has been pushed to the left, the release button can be actuated and the inner pipe retracted. Done!

The ST telescopic drywall support is available in three sizes: The ST125 with an adjustment path of 75 to 125 cm as well as the ST250 with an adjustment path of 145 to 250 cm have a load limit of 60 kg. The ST290 version with an adjustment path of 160 to 290 cm can be loaded with a maximum of up to 50 kg.

*At BESSEY, we have a long tradition of producing such **innovative, practical product solutions** as this. Since the cold drawn steel plant was founded in Stuttgart in 1889, the Bietigheim-Bissingen based company continues to raise the bar in clamping and cutting technology. Currently offering more than 1,600 products, BESSEY has a specific solution for practically every application. Our focus is on precision and durability, convenience and safety.*

***“To stop improving is to stop being good.”** This was the motto of company founder Max Bessey and it remains our guiding principle today –in all that we do and produce. This means that we are constantly developing new products and improving existing ones to make the user's life easier, on the basis of innovative ideas. Such innovations are worthwhile.*
