## Introducing the BESSEY Telescoping Support Rod

A support rod is a tool designed to help hold building materials in place, while freeing up the installer's hands such as drywall, wood paneling, trim pieces or virtually anything within the capacity rating of the support.

## The Perfect Solution

BESSEY offers the perfect solution with the new **STE Series**. The **STE Series** is available in three sizes: 58" – 98" 67" – 118" 82 - 145".

The STE Series is one of the most powerful supports on the market with a load capacity of 350 lbs at the maximum vertical extension and 770 lbs when the telescopic support is fully retracted.

The **STE Series** can be used in spaces as low as 58", and as high as 145".

## Innovation

Patent pending - The support can be adjusted to the exact requirements in a few simple steps with one hand. The pump mechanism and quick-release button are built into an ergonomically shaped handle. Simply pump the handle to the desired height, then twist the handle clockwise to apply the precise pressure required. The **STE Series** boasts a swivelling non-slip PVC pad with a range up to 45° on a clean dry surface. Use the pads convenient anchor points when in doubt.
