

Our BESSEY tools in use

Bureau made from oak bridge beams

Simply better.

A masterpiece, giving old materials new life

- The old beams were meticulously processed into panels, which were then used to produce the body parts for the piece of furniture. These can be pulled out and have shelves and storage compartments on the sides.
- The beams look substantial, which is reflected in their weight, and so they are mounted on a filigree frame made from steel bar. Its rusted surface is a further way to illustrate the character of the materials used.
- In the centre section, the writing surface is made from fine leather with a plug for electronic devices. The work light, which is integrated into the folding top, provides comfortable illumination of the workspace.

Which BESSEY products were used and what characterises them:

Two **REVO KR** body clamps with an opening width of 1,500 mm were used. In conjunction with the **Tilting K Body clamp adapter KR-AS**, this was an ideal setup for gluing the body parts, as all of the parts were tilted by 3-5 degrees, thanks to adjustments to the frame. It was therefore possible to save on costly jigs which would otherwise have been necessary for the gluing process. The tilting adapter – whose contact surfaces provide excellent grip while protecting the workpiece – was attached to the clamping faces of the body clamps in only a few steps, without the need for extensive preparations.

These BESSEY products were used:

Tilting K Body clamp adapter KR-AS

- Adapter with tilting clamping jaws with a tilt range of -15° to $+15^\circ$
- Clamping on sloping and parallel surfaces

K Body REVO KR

- Clamping force up to 7,000 N
- Very large parallel clamping surface
- With 3 pressure caps to protect delicate surfaces
- Can be converted to spreading function with no need for tools
- High-quality 2-component plastic handle

Further products from the K Body REVO range:

Vario K Body REVO KRV

Framing set KP

K Body Extender KBX
