

Our BESSEY tools in use

"System Plus" flexible cabinet system

Simply better.

This BESSEY product was used:

Clippix XC

- Light and easy to handle
- Functional and ergonomic
- Extremely strong

System Plus

- HPL coated beech laminate panels, that can be individually fastened together with the help of dark stained beech corner pieces (connecting joints).

Which BESSEY products were used and what characterises them:

Numerous **Clippix XC7** clamps were used.

- The connecting joints are comprised of a total of 13 parts, which must all be glued together at the same time. This was not possible using conventional clamps.
- More than anything else the clamping force of the XC7 far exceeded all expectations and it was the ideal solution for the problem.

Further products from the spring clamps range:

VarioClippix XV3-50 / XV5-100

VarioClippix XV5-170

VarioClippix XCL
